AURA WALL INSTALLATION

TEMPORARY MODULAR ROOM

The Aura Wall System from Artitalia Group was originally designed as a flexible and modular wall system that could be prefabricated and easily erected in-store to create rooms large enough to hold stock and/or can be scaled down to as small as an additional fitting room.

With the current strain of Coronavirus, this system can be used to house various items or equipment, and can be placed within the “social distancing” guidelines. This system allows for quick installation with limited installers.
