Sterilcoat: Germicidal Powder Coating available by request. Additional costs may apply.

VACCINATION STATION

As vaccines begin to ramp up for Covid-19, Artitalia Group has designed a solution for creating areas to administer and distribute vaccines. The Vaccination Station can significantly help hospitals, pharmacies, and other vaccine distribution locations to safely administer vaccines all while adhering to strict health care protocol.

Made with a high-quality tubular frame, clear polycarbonate panels, a convenient front cutout for vaccine administration, and complete with swivel casters, the Vaccination Station was designed to sustain the rigorous “back-and-forth” of creating temporary vaccination areas. By conveniently folding, the station can be efficiently shipped or stored anywhere.

The added Sterilcoat finish, an antimicrobial powder coating, prevents the spread of dangerous micro-organisms.
